# READY ROOFING.

THE BEST READY ROOFING in the market, made of two and three.ply tarred felt. Between each ply of felt a layer of water-proof cement is forced, the whole being pressed through steam rollers of great weight, making a most compact and durable roofing material, which, after being fastened to the roof, is finished by a coating of our ASPHALTUM CEMENT, thereby forming a strictly Water-Proof roof.

Thus, a Good and Substantial roof is obtained, which will last Twenty Years by giving it the same care as is given to tin roofs, and, as a natural consequence, will remain water-proof and fire-proof a greater length of time.

ANY MAN CAN APPLY IT. Any one wanting a Good roof can rely upon my2 and 3-PLY answering the required purpose on a building of any size, whether the roof be flat or steep. FARWERS can keep the roofs of their DWELLINGS, BARNS, GRANARIES AND SHEDS in good repair without the aid of the carpenter

MECHANICS will find READY ROOFING superior to any in the market, and fill all the requirements of a good roofing felt. RAILROAD COMPANIES can obtain a cheap, durable roof for SHEDS, STATIONS AND RAILROAD BUILDINGS generally. This roof will prove as durable and satisfactory as tin, at much less cost.

ASPHALTUM CEMENT.

My Asphaltum Cement is prepared by me ready for use, and put up in 5 and 10 gallon cans and half barrels and barrels, and can be applied by anybody, and insures the wearing qualities of the roof, just as metallic paint does tin. The CO T of this roof is less than any roof offered to the public, and will outwear many more expensive. It is put up in rolls, each covering 100 square feet, exclusive of two inches allowed for lap, and covering the space of 1,000 shingles, and wrapped and labeled with directions for laying same.

While it is perfectly water-proof it is impervious to dampness and will not mildew. It is the best Ready Roof for Railroad Buildings and Sheds, Chemical Works, Laboratories, Factories, Wharf Shedding, Agricultural Works, Farm Houses, Barns, Sheds, Residences

DIRECTIONS FOR LAYING READY ROOFING. Commence laying felt across the roof, beginning at eaves or gutter, (if there be any), allowing two (2) inches for every lap, being careful to coat each lap with my Asphaltum Cement. Nail the upper edge to each course with a four penny nail, using tin caps which I furnish, as, washer, being careful not to nail through joints of boards. When finished laying, coat whole roof with Asphaltum Cement and let dry, then apply finishing coat. (Sand may be sprinkled in the finishing coat before drying, although it is not necessary to do so with my ASPHALTUM CEMENT—some prefer it).

In conclusion, I desire to say, for the benefit of those who are unacquainted, that it is a perfectly reliable article, its durability and economy having been thoroughly tested by use. It has the approval and recommendation of all the leading architects and builders. It is manufactured of materials which have been in use for years and which are conceded to be the best in the world. It is sure protection against fire and costs one-third the price of tin.
